Portfolio | **LinkedIn** | **GitHub**

PROFESSIONAL SUMMARY

Computer Science graduate from FUUAST Islamabad with a CGPA of 3.75/4.00, ranking third in the cohort. Skilled in Python, AI-based application development, computer vision, object detection/ tracking, and desktop software engineering. Experienced in building practical systems using machine learning libraries, computer vision tools, and graphical user interfaces.

EDUCATION

BS Computer Science — **FUUAST Islamabad**

2022 – 2026 — *CGPA: 3.75 / 4.00*

TECHNICAL SKILLS

- **Programming:** Python, Java, C++
- **AI & Computer Vision:** Machine Learning, Deep Learning, OpenCV, Ultralytics YOLO, ByteTrack, MediaPipe, Object Detection & Tracking
- **Libraries & NLP:** PySide6, NumPy, TensorFlow/Keras, scikit-learn, Streamlit, TF-IDF, Cosine Similarity, Vosk Speech Recognition
- **Tools & Databases:** Git, GitHub, Visual Studio Code, PyInstaller, SQLite, Requests, music21, MyMemory Translation API

WORK EXPERIENCE

Artificial Intelligence Intern — **CodeAlpha**

Recent Placement

- Developed practical AI projects incorporating computer vision, object detection, and multi-object tracking.
- Engineered solutions involving natural language processing (NLP), automated language translation pipelines, and deep learning-based music generation.

PROJECTS

VisionSlide: AI-Enabled Gesture & Voice Controlled Presentation System — **Final Year Project**

- Developed an offline desktop application for touch-free presentation control using real-time hand gesture and offline speech recognition.
- Built a responsive PySide6 desktop GUI to deliver real-time system feedback and presentation status.
- Integrated system-level input simulations to achieve seamless, automated slide navigation.

Source Code: **GitHub**

AI-Based Real-Time Video Analytics System

- Engineered a robust desktop application for real-time stream and recorded-video analysis.
- Implemented deep learning-based object detection using Ultralytics YOLO and multi-object tracking via ByteTrack.
- Programmed advanced analytical modules for object counting, line crossing detection, zone monitoring, and trajectory tracking.
- Designed a unified graphical desktop interface to manage live camera feeds and historical files.
